Can't attend? Register anyway and we will send you the slides directly to your inbox after the webinar

Details

Date: 28 May 2020

**Time: 10.30am – 11.30am
(last 15 min Q&A)**

The link to join the webinar will be sent to you in the confirmation email upon registration.

This webinar is complimentary.

About the Seminar

Building automation has evolved significantly beyond just control systems for HVAC and lighting. With the emergence of IoT and a new generation of intelligent edge devices, "smart" has taken on an entirely new meaning for building automation. However, buildings are also at an increased risk of cyber attacks as they collect more data, become more inter-connected and extended outside of their original operating environment.

This webinar will focus on key cyber security risks for buildings, explore ways to mitigate these risks using IT and OT technologies, and provide case studies on successful implementation of IT/OT convergence solutions.

Key Takeaways

- Identifying key cyber security risks and trends in smart buildings
- Understanding IT/OT convergence and what it means for facilities/building managers
- Exploring ways for OT users to mitigate risks of cyber attacks in smart buildings

Who Should Attend

- Building Owners
- Facility Managers
- IT Engineers

Speakers

Kelvin Ong

Product & System Application Manager, Schneider Electric Singapore

Kelvin joined Schneider Electric in 2006 and is presently a Product & System Application Manager for Digital Energy Division. He has been actively involved in Energy Efficiency and Power Monitoring projects for critical facilities such as banking, data centres and airport. Leading a team of Engineers, Kelvin helps corporations achieve energy visibility for their sustainable energy efficiency improvement work.

Doreen Tang

Regional Sales Manager, Operational Technology Fortinet

Doreen Tang is the Regional Sales Manager for Operational Technology business in APAC region. With 15 years of experiences in Industrial Automation Control System, it allows her to advice and develop Go-To-Market strategies for Process Automation vendors; such as Oil & Gas, Water and Wastewater Treatment Plant, Power Plant, Real Estate and more.
