BIM & PRODUCTIVITY

Certification Course in **BIM MODELLING (Structure Track)**

Building Information Modelling (BIM) is a process that involves the generation and management of the information about a facility. BIM allows for great integration and collaboration among different building professionals of various disciplines to explore digitally, and can be used throughout the entire building process from design stage through construction stage and even post construction building management.

Commencing on 22 June 2020

SUSTAINABILITY

Building Automation Concepts, Technologies and Practices for Green Buildings

Smart automation technologies are changing the way we work, live and play. Building automation systems enhance energy efficiency, occupant satisfaction, security and facility management. After attending the course, participants will have a better understanding of how building automation technologies can be leveraged to boost environmental sustainability of buildings and to enrich the everyday lives of building occupants and improve overall building performance.

Commencing 23 June 2020

SUSTAINABLE HOT WATER & HEAT RECOVERY SYSTEMS

The course aims to increase the awareness of the safety issues and unpleasant experience and affinity to traditional hot water solutions, and will help the participants to better understand the different types of hot water systems and explaining the financial calculation require to justify the adoption of a sustainable system. The participants will learn to design energy efficient hot water distribution and heat recovery system.

Commencing 27 July 2020
