Greater Digitalization in Engineering Design

Key topics:

Possibilities in Engineering Design in the Greater Digital World

While Digital/BIM era in engineering design is reaching its next stage with Automation and Generative design and pushing the limits of the engineering design to new level in terms of design efficiency, saving construction time and cost. It is also opening new a doors for engineering team to serve client with new discipline -Digital Engineering. This session discuss the present and future digital possibilities in engineering design.

The Ultimate Goal: Automation and Optimization for High Value and Sustainable Outcomes

How will the role of the engineer evolve during this time of dramatic digital disruption? What does this mean for engineers, clients and the built environment? This presentation will discuss what skills future engineers need in order to fully harness the power of automation and deliver optimized designs.
