Speaker:

**Mr Safinderpal Singh Sandhu**

Deputy Director,  
Business Development & Sales  
SP Digital

**Dr Choo Thian Siang**

Lecturer,  
School of Architecture &  
The Built Environment  
Singapore Polytechnic

**Dr Soh Chew Beng**

A/Prof & Program Lead  
of Sustainable Infrastructure  
Engineering degree program,  
Singapore Institute of  
Technology

## Towards a Super Low Energy Built Environment

Our buildings are responsible for more than a third of Singapore's total energy consumption. Over the years, industry players from both the public and private sectors have worked together to develop and deliver buildings that are increasingly energy efficient for a more sustainable built environment.

The growing spectre of climate change necessitates going further and doing more. Super low energy buildings will have important roles to play, with their heavy emphasis on best-in-class energy efficiency, the use of renewable energy and intelligent energy management strategies to advance the built environment towards one that is greener, energy efficient and low-carbon. In this webinar, hear from industry experts as they unpack the nuances of going super low energy and gain insights into advancing next-generation energy efficient buildings.
