UPCOMING WEBINAR

Digitalization for Greater Productivity

Friday, 21st January - 3:00 PM SGT

REGISTER NOW

The banner features a photograph of two individuals, a man in a blue suit and a woman in a grey dress, smiling. The text is positioned on the left side of the banner.

A very Happy New Year to all!

We are pleased to announce our first joint webinar with Sansan, SIBL's newest Enterprise Member. Join Edward Senju, Sansan Regional CEO and Vanessa Tang, AcePLP and SIBL Board Director as they share how on-site and back office professionals in the Singapore built environment sector can potentially rethink the ways to implement and reap the benefits of digitalization, as the industry continues to better navigate the on-going endemic.

Webinar Details

Topic: Digitalization for Greater Productivity

Date: Friday, 21 January 2022

Time: 3:00PM - 4:30PM SGT (90 mins)

Seats are limited, so get your first headstart of 2022 and [register now](#).

**This webinar is complimentary for local industry practitioners.*

Session 1

Building Information Modeling (BIM) in a Common Data Environment (CDE)

- Vanessa Tang, AcePLP

As digitalization emerges as a major driving force for greater resilience and productivity in Singapore's built environment sector, the ability to allow project teams to create, organise, and share information for tighter collaboration and decision-making has become a necessity. By establishing a CDE, critical project and asset information contained in BIM models and other data sources can be appropriately managed based on the principle of controlled information sharing,

coupled with documented checks at key project milestones in a timely and trusted way.

Vanessa Tang, AcePLP's Director of Corporate Development, will explore the following key issues on how an organization can build a robust central information repository in the form of a CDE that is at the heart of BIM implementation.

Key takeaways:

- Why the CDE is central for the proper management of an organisation's project and asset information
- Basics of the CDE – how is it being used, who the responsible parties are, and who should contribute to it
- Role of the ISO 19650 series of standards for the organization and digitalization of information about the built environment projects and assets in the CDE

Session 2:

Kaizen for Business Process Transformation - From Analog to Digital

- Edward Senju, Sansan

Radical transformation does not happen overnight. Especially for an industry deeply ingrained in manual and paper-based processes - only with relevant digital tools and timely training can employees be empowered to change, beginning with gradual shifts towards digitalisation - essentially by leveraging on the Kaizen way.

In this session, join Sansan's Regional CEO Edward Senju where he will share how forward-looking Japanese companies in the building environment industries adopt Kaizen in driving effective digital transformation that generate significant benefits such as cost and time savings, and empower teams to perform at high levels of productivity.

Key takeaways:

- How digitalisation through Kaizen approach can give companies a competitive edge in the new digital economy, and free the backend teams to do higher value work
- Real-world case studies on how some companies use the Kaizen philosophy to digitalise for greater productivity, especially during the current pandemic

- Best practices to immediately start implementing effective digital transformation in your company by adopting the Kaizen mindset
