

As announced by Minister for Finance Mr Lawrence Wong at Budget 2022, Singapore will raise our climate ambition to achieve net zero emissions by or around mid-century. To enable the transition to a low-carbon future, the carbon tax levels will be raised progressively from 2024. This will support Singapore's climate ambition and secure a greener and more sustainable living environment for future generations, while being economically competitive in a low-carbon future.

Also, there are a range of ways to limit warming in line with global climate goals, according to the latest report from the United Nations' Intergovernmental Panel on Climate Change (IPCC). The third part of the IPCC's 6th assessment report, known as Working Group III (WG3), provides a detailed view of possible futures.

Do join us at our upcoming **Climate Risk** workshop and be equipped with knowledge of the risks and opportunities associated with the transition of the global economy to a low carbon economy. Our expert speaker, Mr Marc Allen, will also be talking more about the new policy in Singapore announced at Budget 2022, as well as the recently released IPCC reports.

Please refer below for more details and registration.

Climate Risk: Risks and Opportunities to a Low Carbon Economy

Apr 29, 2022
(9 AM - 5 PM)
(GMT+8)

Singapore Sustainab...
Singapore,

Date: 29 April 2022

Time: 9am - 5pm

Mode of delivery: Virtual via Zoom

This GHG training course in Singapore aims to provide participants with knowledge of the risks and opportunities associated with the transition of the global economy to a low carbon economy. One of the key drivers of this transition is climate change, and global policy efforts to minimise the impacts of climate change - led by international negotiations and the Paris Agreement. This global policy framework is used by nations then to develop national climate change policy. In addition to regulatory risks and opportunities, there are a number of interested stakeholders who are increasingly requesting information from businesses about their exposure to climate risk.

Risks such as social license, access to credit and equity, market-related risks and technology risks are also explored in this course. 2018 has been designated the Year of Climate Action by the Singaporean Government, and regulation in the form of a carbon tax is in the process of being implemented - as such, the local context of climate change action will be explained.

Objectives

The objective of the GHG training course in Singapore is to provide participants with a base knowledge of the climate change related issues that may affect all businesses in the future.

Certificate

All participants will receive a Certificate of Attendance from SEAS upon completion.

SCEM Participants will be awarded with *7 PDU Points*
