

## GET™ Control: the smarter way to manage indoor air quality

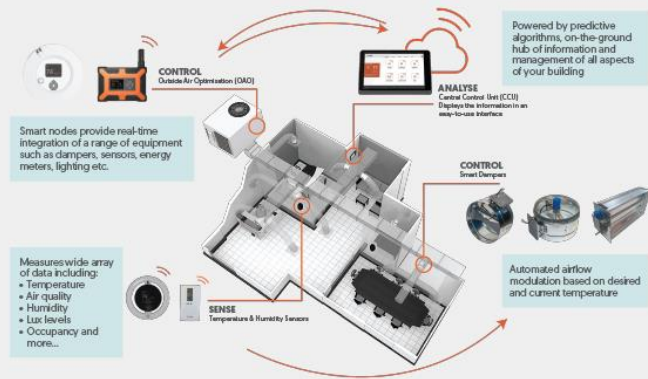

Dear colleague,

Now that more people are returning to work in offices, there's a pressing need to improve Indoor Air Quality. Without racking up costs, of course! We can help you solve this impossible task, through the use of data insights, IoT, predictive algorithms and cloud computing.

### Keeping the air fresh

Replacing indoor air with fresh outdoor air helps prevent the build up of viral particles. However, conditioning the air requires energy and adds to costs. With our proprietary Dynamic Airflow Balancing + Outdoor Air Optimisation system that leverages predictive algorithms and cloud computing to make finely-tuned adjustments, you can maximise ventilation and comfort at optimal cost.

### Cool comfort for occupants

Tracking factors such as weather and room occupancy enables you to even out the hot and cold spots, and to ensure comfort in all areas.

### Managing energy loads and costs

Our system continually monitors the air quality, occupancy and setpoint data in the office, and proactively adjusts conditions to manage your building's energy loads effectively.

### Easy retrofit

Our micro-climate control system can connect to any BMS (Building Management System) and be easily retrofitted to existing equipment.

### Full control anytime, anywhere

Remotely manage the system on a micro-zone level through a mobile device, so there's no need to house data servers or have a dedicated response terminal in a fixed location.

The GET Control solution comes with Facilisight®, a suite of web and mobile apps. You'll have actionable insights, and real-time monitoring and control of indoor air quality, comfort, acoustics, light and thermal levels.
