

Climate Change Resilience in the **Built Environment**

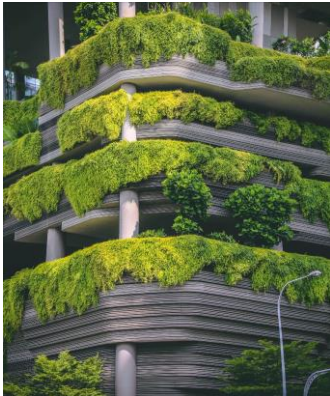

Under the inevitable impacts of climate change, resilience action is essential to build community capacity to survive and thrive in our built environments.

The **World Green Building Council** (WorldGBC) has partnered with the **UN High-Level Climate Champions** and **C40 Cities** to deliver this timely resource for enabling adaptation at different urban scales - and inspiring decisive action.

This guide provides effective and practical steps that can be taken on a building, community and city scale to adapt and build resilience for everyone, everywhere.
