

Transitioning to Net Zero for the Built Environment Sector

Tuesday, 17 Jan 2023 | 3:00PM - 5:00PM (SGT)

The built environment sector is responsible for 40% of global carbon emissions – in both construction and operation. With progress being made to reduce those emissions alongside increasingly greater awareness of the environmental impact of our buildings, stakeholders and shareholders now also have greater environmental, social and governance (ESG) expectations.

There is therefore a significant business opportunity: decarbonising the built environment can create as much as \$800 billion to \$1.9 trillion in new green value pools across sectors. During this **SGBC Webinar** in collaboration with SGBC Member Unravel Carbon, you will learn:

- Why actors in the industry should transition to net zero

- What is the current stage of industry transformation
- The interplay between operational and embodied carbon emissions
- What are the levers available for transitioning to net zero
- The implementation and roadmap required to get to net zero
