

Innovation & Technologies for Sector Transformation

Singapore's commitment to environmental sustainability and resource efficiency provides a strong foundation for the development of innovative solutions and technologies. This has enabled more building and construction projects to pursue decarbonisation pathways and aim for higher levels of sustainability performance.

Enabling this transformative change in the built environment sector are SGBC-certified [products](#) and [services](#) that empower stakeholders to make informed choices. Scroll down and discover Singapore's thriving sustainable built environment, where innovation and policy meet sustainability for a low-carbon and resilient future.
