SGBC Bulletin – July 2024

# Sustainable Finance and Green Buildings

While green buildings offer numerous benefits, including reduced operational costs, enhanced occupant health, and increased employee productivity, they require substantial capital for design, construction, maintenance, and operational improvements. To promote the greening of the built environment, there has been a steady rise in sustainable finance products specifically designed for the property sector. These financial incentives facilitate access to capital for investing in low-carbon technologies and renewable energy systems, thereby encouraging real

estate businesses to align their values with the adoption of sustainability strategies.

Learn more about the industry efforts below!

# Understanding Sustainable Finance

## Financing Transformation

A Guide to Green Building for Green Bonds and Green Loans

Brought to you by:

## A Guide to Green Building for Green Bonds and Green Loans

Launched by an international alliance of world leading green building rating system organisations as the first global practical guide to facilitate the \$35 trillion investment needed by 2030 to meet global energy transition goals.
