

In Singapore's tropical climate, overcooling is common – but it comes at the cost of discomfort, higher energy use and additional utility bills. It also accelerates climate change and exacerbates the urban heat island effect. The **Go 25 movement**, encourages all Singapore residents to adopt optimal cooling practices, starting with setting indoor temperatures to at least 25°C in their homes, offices, and buildings.

It's more than just a number; it is the sweet spot for comfort and sustainability, and a call to action for all of us to pave the way in creating smarter, more sustainable Singapore.
