Grease Separators

Access Covers

Light Oil Separator

Singapore prioritizes water protection through a combination of robust water management practices , conservation efforts and local coded of practice.

For food establishments for example, grease traps are mandatory to control oil and grease in culinary wastewater, while for industrial applications mineral light oil needs to be filtered out before it being released back to PUB sewage.

ACO provides for either scenarios proprietary solutions for below ground, as well as above ground installations which will be introduced in depth during the seminar.

**6** CLEAN WATER  
AND SANITATION
